

What went well?

What should we keep doing?  
What should we celebrate?  
Where did we make progress?

We should increase crop production by developing organic products to ensure crops with high yeild of nutrients.

We should celebrate agriculture which was doing in biotechnologically modified crops for good production.

We make progress in testing more varieties of crops like wild type to protect and improve the genetic characters of crop

What went poorly?

Where did we have problems?  
What was frustrating to us or others?  
What held us back?

We have problem with artificial fertilizer usage which decrease crop production and soli efficiency to produce fertile soil.

We should encourage farmers during their hard times during improper yield.We should ensure the life of farmers all time.

Conversion of agricultural land's into constructions and building makes us held back in crop productivity

*Government must purchase all the products directly from the farmer.*

*All banks should give loan to Farmer with low interest. Government should provide to increase the time of free electricity*

*Government should provide a special grade of credits to farmers and also provide quota for the son of farmers to obtain government jobs.*

We should increase crop production by increasing agricultural land instead of building construction.

We should change the habit of discouraging farmers and they should be respected as doing honourable profession

Agriculture should be made as a government job which encourages more people to do Agriculture instead of running in cities.

What ideas do you have?

What ideas do you have for future work together?  
Where do you see opportunities to improve?  
What has untapped potential?

How should we take action?

What do you believe we should do next?  
What specific things should we change?  
What should extend beyond this meeting?
